

ABSTRACT OF THE DISCLOSURE

A system and method for displaying an image configured to be printed on a print medium in its selected size. According to one aspect, a terminal displays a plurality of images from which a user may select to view at least one of the images to be printed. The
5 terminal is operable to enable the user to select specific characteristics of the image as well as the mounting background upon which the image is to be positioned. A display device is attached to the terminal to display the selected image along with their selected characteristics according to their selected attributes (e.g., sizes and colors). A printed version of the selected image may be printed according to the selected attributes of the selected image substantially
10 immediately following the selection of the image and its attributes.
